

Huronia

WELCOME TO THE TEAM!

It is my pleasure to formally announce that Huronia Alarm & Fire Security Inc. has acquired Canadian Security Alarms out of Barrie. It is also my pleasure to welcome Kolin Lee, the owner of Canadian Security Alarms, and his brother Kris Lee to the Huronia team.

Kris will take on the role of Security Alarm Technician and will be based out of the Collingwood office. His many years' experience in security alarm sales, installation and service of alarm panels, CCTV, access control, intercom and networking systems is going to greatly assist our current team deal with the increased demand for our security and monitoring products and services.

Kolin owned Canadian Security Alarms for twelve years. He also sat on the Board of Directors for the Canadian Security Association for a number of years. Kolin will take on the role of Senior Security Technician, and will also work out of the Collingwood office.

Please join me in welcoming Kris and Kolin to Huronia.
~Rob Thorburn Jr., President and CEO

HURONIA SPONSORS THE GTHS WALK-A-THON!

Rob Dozzi and mascot Jazz representing Team Huronia!

Huronia will be participating in the **6th Annual Friends for Life Walkathon** in support of the **Georgian Triangle Humane Society (GTHS)** again this year.

The GTHS has an urgent and on-going need for support from our community. They receive no form of government funding, and rely on sponsorships and donations to help animals in need.

The Walk-a-thon will take place on Sunday September 23rd, 2018 in the Blue Mountain Village.

We are thrilled to be participating as a Sponsor, but we are also proud to be participating with a team of walkers (and our mascot Jazz who walked with us last year!)

We are encouraging all of our customers, suppliers and associates to get involved as a team, or to register as a single walker. Dogs are welcomed, but not required to walk! **[Click here to register.](#)**

RECREATIONAL VEHICLE AND MOTORHOME FIRE SAFETY TIPS

With another long weekend on the horizon, many of our Customers will be taking their families on the road for some end-of-summer-days camping! Practising fire safety while travelling in an RV or motorhome is just as important as the measures you take to prevent fires in the home.

Here are some tips from our associates at the [Windsor Fire and Rescue Services](#).

1. When travelling in an RV make sure you know your exact location so emergency responders can find you in the event of an emergency.

2. Just as you do at home, make sure you and everyone travelling with you knows the fire escape plan. Have at least two escape routes - one in the front of the RV and one in the rear of the RV. Test all escape windows, hatches and

door latches for smooth operation and keep all escape windows, hatches and doors clear of any obstructions. As soon as they are old enough, teach children how to open escape hatches and emergency exits and have them practise.

3. Install and maintain at least one smoke detector AND one carbon monoxide detector in your RV near the sleeping area. Depending on the size of your RV and placement of sleeping areas, more than one smoke detector may be required.

Please take note that carbon monoxide detectors that are designed for a bricks and mortar homes require 110v power and will only work when your RV is plugged into an electrical source at the campsite. Be sure you have a 12v battery supplied carbon monoxide detector for when you're on the road.

4. Install a propane leak alarm at floor level, no more than 6 inches above the floor or lowest level to alert you in the event of a propane leak. If you have a leak, immediately evacuate the RV and shut off the propane at the tank, but only if it is safe to do so.

5. Make sure you have your ABC fire extinguisher inspected before you leave and that it is installed near an escape exit. Also make sure that each traveller knows its location, and how to use it. [Need your fire extinguisher inspected? Stop by a Huronia Alarm & Fire Security Inc. location today.](#)

6. Lastly, when you are cooking inside the RV make sure to open an overhead vent or turn on the exhaust fan. Also open a nearby window to allow carbon monoxide gasses to escape, and fresh air to enter! Remember to never leave cooking unattended.
